Supply Chain Logistics Consulting Ltd Invest in LGV Vehicle Routing and Optimisation Software

With rising pressure to minimise damage to the environment, rising fuel costs and competitive squeeze on prices, minimising travel distances is essential. There has never a better time than now to look at ways of reducing your transport and distribution costs.

About Us

Supply Chain Logistics Consulting Ltd is an independent UK Company who is committed to helping businesses reduce their transport costs. We use latest advanced vehicle routing and scheduling technology which is helping businesses to cut transport costs, improve productivity, reduce planning time and raise customer service levels.

We have over 25 years of transport and distribution operational experience. This coupled with our highly flexible and configurable routing and optimisation tools means that we can provide transport optimisation and execution know-how across a wide range of industry sectors.

Benefits - Routing & Scheduling Optimisation

The benefits of using advanced routing and scheduling optimisation tools which have been developed specifically for the transport industry and have been proven to help companies:-

- Reduce transport costs by up to 20% - by cutting mileage and improving driver and vehicle utilisation
- Improve customer service
- Cut carbon emissions
- Maintain efficiency of transport resources during execution
- Increase control of transport through better management reporting
- Reduce delivery lead times
- Improve strategic decision making
- Reduce administration costs
- Underpin strategic growth objectives

Planning - Routing & Scheduling Optimisation

Routing and scheduling can be used to plan and optimise transport and service operations across a wide range of industry sectors. We use our software to help customers model operational, tactical and strategic planning scenarios. Our software is fully dynamic and can handle many different types of delivery constraints, timed deliveries, special vehicles, multiple units of measures and all vehicle types.

Resource Management

Our routing and optimisation tools includes resource management which enables us to efficiently help our customers manage their transport resources - drivers, tractors, trailers and vehicles - and effectively integrate the allocation of individual transport resources into the route planning and optimisation process for maximum efficiency.

Management Reporting

Our routing and optimisation tools have great reporting capabilities that enable us to clearly show you your current costs and how our recommended changes to your vehicle routing and planning processes will reduce your fleet running costs. The wide range of configurable reporting capabilities provides detailed information for transport management.

What we do

Using your traffic data we will model your distribution routes and vehicles to show the lowest cost way of running your fleet of vehicles. You will be able to compare your current vehicle routing and associated costs against our recommendations.

Route Monkey – LGV Routing and Optimisation Software

Supply Chain Logistics Consulting Ltd has invested in a state of the art LGV Routing and Optimising Software Solution that delivers great results and optimised vehicle routes, thus removing unnecessary costs from our customers fleet operations.

02.
route monkey™: Delivering optimum efficiency to satisfy your routing and scheduling needs

- Affordable packages
- Simple to use
- End to end solutions
- Suits all business types

RouteMonkey gives you the power to ensure your vehicles and resources are operating at optimum efficiency

03.
route monkey™: Driving inefficiency from your business

- Less wasted miles
- Improved fuel efficiency
- Greater productivity
- Maximum customer satisfaction

RouteMonkey delivering efficiency improvements throughout your operation

04.
route monkey™: The flagship product is our routing and scheduling software available in two main applications – semi dynamic and fully dynamic

Both products are design to be easy to integrate with your existing business applications or, at the very least, allow for the easy import of your data and allow you to effortlessly schedule your resources

- Reduced planning time required
- Reduced resource in planning
- Improved planning efficiency

Free trial and results service available to demonstrate the efficiency of RouteMonkey software

05.
route monkey™: In addition to routing and scheduling we have a suite of solutions to satisfy your business needs:

- Back office and CRM solutions
- Mobile workforce applications
- Middleware integration
- Vehicle and asset tracking

All modules can be integrated with your existing software solutions.
